The Daikin Altherma HPC a fresh approach to home comfort

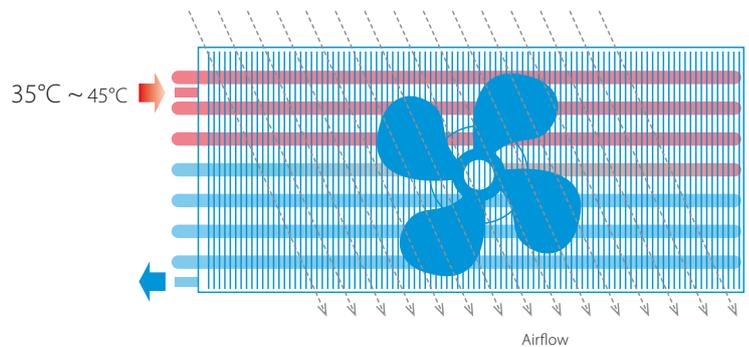

By providing cooling and heating, Daikin Altherma HPC is combinable with underfloor piping and can replace outdated radiators. The unit fits in bedrooms and living rooms thanks to its silent operation and elegant design.

What is a heat pump convector

The way a heat pump convector works is similar to a radiator, as both use convection to heat a room. A radiator creates convection by running water through its pipes. With a heat pump convector, a radiator's convection process is faster because there is a small fan behind it speeding up the heating cycle.

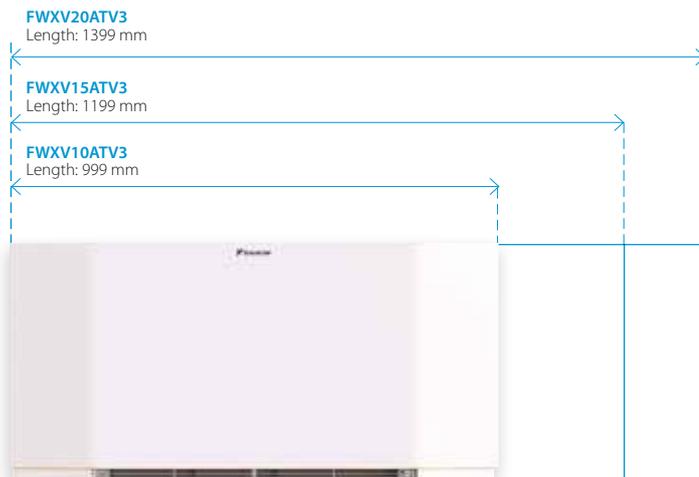

A heat pump convector creates the same room temperature as a traditional radiator, but with lower water temperatures in the radiator, and in the long run, contribute to direct energy savings for users.

- > Optimized for new build houses
- > Can be selected at low water temperature (35°C) which makes it ideal for heat pump applications.

Slim design

Measuring 135 mm (depth), this heat pump can fit in any house or apartment.

Fast and high capacity

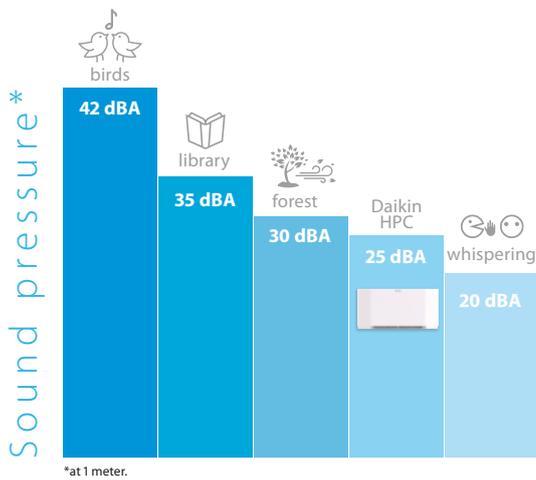

The Daikin Altherma HPC combines the advantages of residential underfloor heating and radiators. It delivers high capacity heating or cooling faster and can be selected at ultra-low temperatures (35/30°C regime).

Silent

As the unit reaches its set point, a continuous modulating fan gradually reduces its speed and creates less noise. The unit's sound pressure measures 25db(A) at 1m when the fan is on a low-speed setting.

DC Inverter

Daikin Altherma HPC uses the latest technologies to consume less electricity down to 3W of standby power input while maintaining its reliable performance.

Controls

Daikin offers a wide variety of controllers that are functional and have a great design.

EKRTCTRL1

- > Built-in controller
- > Fully modulating
- > Multicolor display

EKRTCTRL2

- > Built-in controller
- > 4 speed selection

EKWHCTRL1

- > Wall controller
- > Fully modulating
- > In combination with EKWHCTRL0

EKPCBO

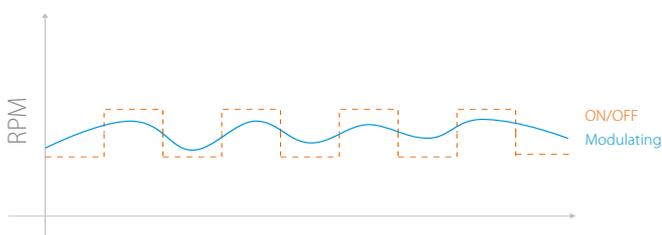

- > Built-in controller
- > ON/OFF
- > In combination with external thermostats

Modulated airflow

When there is less heating demand, the unit modulates its airflow to slow down the fan rate, and in the process, lowers the operational sound. A standard ON/OFF fan running simultaneously at full speed can increase sound pressure.

* Only applicable for EKRTCTRL1, EKWHCTRL1

Perfect combination

This heat pump convector fits perfectly within the Daikin Altherma 3 range.
